

Projects Construction and Development

Project experience in the field of design and plastic-compatible construction

We accompany from the innovative idea to the successful product throughout the entire product development phase. With expertise, creativity, and passion, we offer the full range from concept development to series production for various industries.

- Concept / design finding
- Prototype creation
- Plastic-compatible 3D construction, including assemblies with other materials
- Creation of 2D manufacturing drawings / bill of materials
- FMEA, FEM, EmPb assessment, and other process-related measures

CATIA V5 is one of the leading CAD programs in development, which is why it is used in our daily work on projects. Data exchange with other platforms is carried out through neutral interfaces.
